Dreamweaver
license Paid. You or your department will have to purchase a license for Dreamweaver.
download site www.adobe.com

Setup
To setup Dreamweaver to connect to the FTP Server, open your site definitions (Site > Manage Sites > Select site > Click 'Edit'). Click the "Servers" tab and the "+" symbol to add a connection to the FTP server.
Use a secure connection
You must select SFTP, FTP over SSL/TLS (implicit encryption), or FTP over SSL/TLS (explicit encryption).

Enter the server address (ftp.smhs.gwu.edu), your username and your password.
**Test connection**
Click the "test" button to verify your connection. If you correctly entered the information, you should get a confirmation like this:

![FTP Configuration Screen]

If Dreamweaver tells you it successfully connected, you are done. You can update the Host directory and other options as you prefer under the "Advanced" tab. After successfully connecting, click OK to close the site definition. See Adobe's Dreamweaver documentation for detailed instructions on using the built-in FTP client.

If Dreamweaver tells you it was NOT able to successfully connect, verify your login and password information. If you are repeatedly unsuccessful in connecting, please contact acws@gwu.edu.
Connecting to the remote server
Click the first icon under the "Files" tab to connect to the FTP server.

Click the last icon to expand the local and remote views simultaneously:
